Experience

Backend Developer, Clawvisor

May 2026 - July 2026

- Built and hardened LLM proxy infrastructure for Clawvisor (YC P26), shipping production backend features across streaming, validation, integrations, and runtime reliability.
- Resolved high-concurrency SQLite contention under 200+ requests/sec by tuning WAL, connection pooling, busy timeouts, and transaction boundaries.
- Added headless runner support with programmatic approval wait APIs, structured denial metadata, token budgeting, and rate-limit queueing.

Full Stack Developer Intern, RocketHealth

Sept 2025 - April 2026

- Helped build rocket-mail, an in-house email platform for cohort-based, multi-step campaigns using AWS SES and SNS event tracking.
- Contributed to BullMQ queue workflows supporting notifications, emails, documents, invoices, and Meta events across 5 verticals.
- Supported the launch and data migration of the Men's and Women's Health products, helping move 6K+ users to the new platform.

Software Developer Intern, Zingvel Travels

December 2024 - May 2025

- Engineered major UI/UX components, including a comprehensive airline ticketing system.
- Developed and integrated Wanderlust, an AI-powered travel recommendation engine that personalized booking experiences and improved user engagement.

Education

Ajay Kumar Garg Engineering College, B.Tech in Information Technology

Nov 2021 - May 2025

- Coursework: Database Management System, Discrete Mathematics, Data Analytics, Computer Networks, Object-Oriented Programming (OOP)

Skills

Languages: Python, TypeScript, JavaScript, SQL

Frameworks/Libraries: Flask, FastAPI, React Native, React, Next.js

Databases: PostgreSQL, SQLite, Redis, MongoDB

Tools & Platforms: Docker, Kubernetes, Git, Kafka

APIs & Protocols: RESTful APIs, WebSockets, gRPC, OAuth 2.0

Projects

MicroManus

[GitHub](#) | [Live](#)

- Self-hosted, tenant-isolated autonomous research agent that searches, scrapes, synthesizes, and compiles structured PDF reports.
- Built a ReAct agent with BYOK providers, AES-256-GCM key encryption, precise token billing, Supabase RLS, and Stripe credits.

CaseVault

[GitHub](#) | [Live](#)

- Built a full-stack legal-tech case exploration platform with a Next.js frontend and Python FastAPI backend for searching and inspecting court records.
- Created an interactive Case Journey and Lineage Engine that preserves source fidelity while surfacing timelines, relationships, and neutral data warnings.

Stash Live

[GitHub](#) | [Live](#)

- Ambient broadcast presenter overlay suite that turns spoken topics into live data cards composited into webcam video over a typed WebSocket engine.
- Built adaptive placement, compression-aware rendering, signed image proxying, and hold-to-talk interaction for Meet/Zoom workflows.

Loql

[GitHub](#) | [Live](#)

- Built a peer-to-peer rental marketplace across web and React Native, with nearby discovery and a secure two-way QR handshake for transaction verification.
- Conducted user research in a large gated community to identify trust and logistics bottlenecks in short-term item sharing.
